

READING, INTERPRETING & DESCRIBING VISUALS

WHY VISUALS?

Tables, graphs, charts, diagrams, photographs, maps, and screen shots add visual interest and are often more effective in conveying information than prose alone. Be certain, however, that each visual has a valid role to play in your work; if the visuals are merely a decoration, leave them out or replace them with a visual that is more appropriate.

TYPES OF VISUALS

- Tables
- Bar Graphs
- Line Graphs
- Pie Charts
- Flowcharts
- Organization Charts

TYPES OF VISUALS

- Diagrams
- Drawings & Cartoons
- Photographs
- Maps
- Screenshots

TABLES

Number of Adults Contracting Colds

	Cold	No cold	Total
Vitamin C	21	129	150
Sugar pill	33	117	150
Total	54	246	300

TABLE 5. Distribution of architects

	<i>Number</i>	<i>% of Total</i>
Projects		
With an architect doing 1 library project only	256	66%
With an architect doing 2 or more library projects	132	34%
<i>Total</i>	388	100%
Architects		
Doing 1 library project only	256	86%
Doing 2 library projects	28	9%
Doing 3 library projects	8	3%
Doing 4 or more library projects	5	2%
<i>Total</i>	297	100%

BAR GRAPHS

Compare Sales Strategy

LINE GRAPHS

Season	Spring	Summer	Autumn	Winter
Frequency	2	6	7	3

A line graph to show the number of earthquakes in a year

Profit

A decorative graphic on the left side of the slide, consisting of a dark blue vertical bar. Within this bar, there are faint, light blue lines and circles that form a stylized, abstract pattern resembling a circuit board or a network diagram.

PIE CHARTS

Favourite Sports Percentage

Recommended Diet

FLOW CHARTS

A faint, light blue organizational chart is visible on the left side of the image. It features a vertical line with several circular nodes, and horizontal lines branching out from these nodes to the left, creating a hierarchical structure.

PHOTOGRAPHS

traces, or “signatures.” Photointerpretation is the art of eliciting information from photographs. Image processing, now largely done by computers, is the refinement of

Photo credit: Department of Defense

Despite some degree of automation, the photointerpreter's task remains largely one of skill, patience, and memory.

trained in image interpretation but willing to go over the photographs “millimeter by millimeter for many minutes.

Examples of Photointerpretation

During the Second World War, British photointerpreters examined imagery of the German test site at Peenemunde for signs of new rocket and jet weapons under development there. Constance Babington-Smith's account of how she found the V-1 ground-launched cruise missile merits quotation at length not only for the insights it gives into the photointerpreter's use of all the information at her disposal, but for the attitude with which she approached her task.

I decided to follow the dead-straight road which led northward along the eastern boundary of the airfield toward the Baltic shore. I passed the limits of the airfield and went on toward the extreme edge of the island. To the right lay an untouched stretch of marshy foreland, but on the left there was a great deal going on--the long-term project of land reclamation for extending the airfield . . . Right at the edge of the road there was something I did not understand--unlike anything I had seen before . . . Rumors of “launching rails” for secret weapons had reached me earlier; and ever since I had been briefed about pilotless aircraft I had been on the lookout for a catapult of

¹Theoretical reasons, as well as experimental results, suggest that the cumulative probability of finding a target in a visual search, e.g. of a photograph, depends upon the time devoted according to the function

$$p = 1 - e^{-kt},$$

where the constant k embodies the difficulty posed by the search because of the size of the target, the size of the search area, the contrast between the
