

Lab No 6

Lab Exercise

1. Write a conversion function query to select the name and hire date for all employees from the employee table and display the hire date in the format 'DD-MON-YYYY HH:MI:SS' and 'DD-MON-YYYY' in two columns, with the TO_CHAR() conversion method.
2. Create a query to add an integer and a decimal number (e.g., 100 + 100.1). Explain the output.
3. Create a query to get and display the employee's full name and the salary with the following statement in the where clause " WHERE salary > '500000' " What happens? Explain the output.
4. Identify which operand is converted in the following:
SELECT * FROM EMP WHERE salary = '500000';
Write two more queries that display applying implicit conversion for the operand values. Further create a query to use an operand value which skips implicit conversion.
5. Write a query to add 15 days to a date created using TO_DATE() in the system.
6. Write a query to extract only the date value from a timestamp. Display the date in the following format 'DD-MON-YYYY'.
7. Display the name for all employees along with their hire dates converted to the string format 'DD-MON-YYYY HH24:MI:SS' for export and sort the results chronologically on the hire date column.
8. Count the total number of records in SALES for the sales done in the first quarter of 2026.
9. Write a query to find the total sales amount using SUM().
10. Write a query to count the number of sales in each region and display the results from the highest to least value of total_sales.
