

SOFTWARE CONSTRUCTION AND DEVELOPMENT

SECTION A QUIZ A

QUESTION # 1:

A software company has a clearly defined rule that all code must be stored and shared through a version control system. However, some developers ignore this rule and directly share code using USB drives or personal storage.

4. Is this issue related to process definition or process implementation?
5. What potential risks and problems can arise from not following the defined process?
6. Suggest some ways to ensure proper implementation.

QUESTION # 2:

3. A company releases roughly the same number of updates each year, even though customer demands increase. Which law applies and what does it mean?
4. A hospital software team avoids adding too many new features in one release because users may get confused. Which law is shown?

SOFTWARE CONSTRUCTION AND DEVELOPMENT

SECTION A QUIZ B

QUESTION # 1:

A software company is growing rapidly and hiring many new developers. Each team follows its own way of working:

- Some teams do coding first, then gather requirements
- Some teams do testing at the end only
- Some teams do not maintain any documentation

The company has no written software development process, no standard guidelines, and no defined steps for handling changes or versions.

7. Is this issue related to process definition or process implementation?
8. What problems can occur when an organization does not have a clearly defined process?
9. Suggest some ways the company can improve its process definition.

QUESTION # 2:

5. A banking system is updated regularly with new services. But after many updates, the code becomes messy and harder to maintain. Which law is this and what risk does it create?
6. A system works well initially. But after years of updates, performance slows down and bugs increase. Which law applies?
