

SOFTWARE CONSTRUCTION AND DEVELOPMENT

SECTION B QUIZ B

QUESTION # 1:

A programmer notices that most of his bugs come from poor logic during design, but he never records or analyzes them.

1. How does PSP help in this situation?
2. Why is defect tracking important in PSP?

QUESTION # 2:

1. An online gaming platform launches the first level, then adds new levels and features based on user testing. Which model fits?
2. A software company adds more developers to a project, but delivery speed and defect rate remain almost unchanged. Which Lehman law explains this phenomenon?

SOFTWARE CONSTRUCTION AND DEVELOPMENT

SECTION B QUIZ A

QUESTION # 1:

A developer is much disciplined, follows PSP practices, and produces high quality code. But the team still fails due to poor communication and weak coordination.

1. Why is PSP alone not enough for team success?
2. How does TSP solve this issue?

QUESTION # 2:

1. A mobile app team releases core functionality first, then continuously improves features based on user feedback. Which life cycle model is being applied and why?
2. A government tax filing system has strict legal requirements. All forms, validations, and rules must be finalized before software development begins. The system must pass formal audits and any changes require official approval. Which life cycle model is suitable and why?

... must pass formal audits and any
... model is suitable and why?
